

Tire Warmer Recommendation Procedures

- 1) Set temperatures for warmers to 70c (158 F) or MEDIUM or ON depending on style of warmers. Heat for 45 - 60 minutes. Front and Rear tires same.
- 2) Set the hot starting pressure immediately before going out on the track (see PRESSURE RECOMMENDATION chart)
- 3) If the bike returns to the pits and is then going straight out on the track, **DO NOT** reset the pressures to the starting pressure.
- 4) If the bike is going sit in the pits between sessions; put the warmers on and leave unplugged. Then 20-30 minutes before your session, plug them in.
- 5) If the bike is going to sit more than 2 hours, start back at #1 above before the next session.
